Bilateral Meetings

- Wednesday (10:00 - 12:30)
- Wednesday (14:00 - 16:30)

Description

The Association CCG - Centre of Computer Graphics, or CCG, created in 1993 is a private, non-profit making research and applied development association. Its principal mission is applied scientific and technological research in the area of Computer Graphics and Information Systems, focusing on the development of activities and participation in national and international R&TD projects. CCG has as its constituent members the University of Minho and FEHST SGPS S.A. in Portugal, and a set of companies and national and foreign institutions. In order to promote R&TD on Computer Graphics and Information Systems as areas of its basic competence, CCG also assumed the role of a centre for technological transfer from the University of Minho to Portuguese enterprises and institutions. CCG is also a founding member, of the excellence network GraphicsMedia.net (<http://www.graphicsmedia.net>): an International Network of Cooperation in Applied Research in Computer Graphics Technology, and Multimodal-Multimedia Visual Interactive Digital Technologies. CCG is structured in four domains of applied research: Computer Vision Interaction and Graphics (CVIG), Engineering Process Maturity and Quality (EPMQ), Urban and Mobile Computing (UMC) and Perception, Interaction and Usability (PIU). Expertise is constantly updated by participating for national and European (international) projects, the majority of them with significant contributions for the state-of-the-art.

Organization Type

University / R&D Institution,

Offer

biomedical image and data analysis

Computer Vision, machine (Deep) Learning, Artificial Intelligence for applications in Quantitative Medical Imaging Biomarkers
