AntiBioCoat/i3S

Bilateral Meetings

- Wednesday (14:00 - 16:30)

Description

Anti-adhesive coating based on a polymer naturally and sustainably produced by a marine bacterium, capable of preventing bacterial adhesion and its subsequent proliferation as biofilm. AntiBioCoat can be applied in a cost-effective way to a broad range of materials.

Organization Type

University / R&D Institution

Offer & Request

Bacteria repellent biopolymer coating

Broad-spectrum high efficient bacterial repellent coating based on a natural polymer
